

## **Assignment 5**

**(8 Sep 2023)**

You need to create a RDS instance for a cloud application. Follow the steps below.

- Create an application for feedback on the personal website that you have developed as part of earlier assignment.
- When someone visits the site, they should be able to add a comment/message. Store these messages into RDBMS tables.
- Create a Python program using boto that creates a the RDS instance with MariaDB/Mysql as database and the corresponding tables. Use a security group with appropriate port open.
- Open the public DNS of the newly launched instance in a browser and verify whether the application works.
