

## **Assignment 7**

**(15 Sep 2021)**

You need to modify the web application which you created earlier as part of your previous assignments to host your personal website. The modification should be as follows.

- The application should be dynamic and should have facility to update the information through web interface. You need to use Content Management System for the same (CMS).
- The platform of development can be any one of Java/Python/Node.js etc.
- Use boto to deploy the application using AWS Beanstalk and configure autoscaling.
- Using boto, configure AWS cloud front as CDN to deliver the contents.
