

## **Assignment 6**

**(10 Sep 2023)**

Create a web application (by using the pages you developed earlier) to host your personal website.

- The application should be dynamic and should have facility to update the information through web interface. You can use Content Management System for the same (CMS).
- The platform of development can be any one of Java/Python/Node.js etc.
- Use boto to deploy the application using AWS Beanstalk and configure autoscaling.
- Using boto, configure AWS cloud front as CDN to deliver the contents.
