CS351-Cloud Computing

Assignment 1

Due in 03 August 2023

(Please take screenshots, reduce the size of the images and submit in Google Classroom)

Part1:

Create an AWS account and Launch an EC2 instance (t2micro), setup putty to login. You will require puttygen to change the key format. You will also need winscp to transfer file.

Part2:

Create a S3 buckets with the following names using AWS management console. In the buckets create 2 folders named as follows.

- ✓ website
- ✓ personal

You need to host a static website (your personal webpage) in AWS using Amazon S3 bucket. You are supposed to keep some files in personal folder and restrict the access to one of your friend only (from the class).
